

Welcome to Spyderco "Reveal" Volume 5!

Welcome to Spyderco's "Reveal" Volume 5, our second new-product announcement of the year. This Reveal complements the Spyderco 2020 Product Guide and Reveal Volume 4 to provide a comprehensive reference of our complete product line.

As always, we have been extremely busy developing and manufacturing new products and are proud to share our newest offerings with you. The items within this Reveal, which are all scheduled for release in mid-2020, include a wide range of folders and fixed blades carefully chosen to offer something for everyone.

For those who enjoy our collaborations with custom makers, we have two new knives based on the designs of Marcin Slys and Japanese knifemaker Kazuyuki Sakurai. Tactical end users will rejoice at all-new personal-defense designs from Michael Janich, special operations veteran Kelly McCann, and Spyderco founder Sal Glessner. Finally, steel aficionados will appreciate elite versions of several established Spyderco models featuring K390, CPM® S90V®, Z-Wear PM, and our own proprietary CPM® SPY27™ blade steel.

To ensure that you don't miss out on any of our latest developments, we encourage you to join Spyderco's internet forum community, follow us on social media, subscribe to the Spyderco byte™ e-newsletter, visit the Reveal page of our web site (Spyderco.com/reveal), and download the Spyderco Smartphone app.

Thank you for staying connected to Spyderco. We truly appreciate your loyalty and your continued interest in our products!

Gratefully,
The Spyderco Crew

The SpyOpera is a utilitarian folding knife designed by Italian custom knifemaker "Max" and originally produced by lionSTEEL®. Through an exclusive collaboration with lionSTEEL, the Spyderco SpyOpera takes this sleek design to the next level by adding a fully accessible Trademark Round Hole™ and a pocket clip. Its full-flat-ground blade is crafted from M390 particle metallurgy stainless steel and supported by a sturdy back lock mechanism. The blade is housed in a handle made with skeletonized full titanium liners, beautifully contoured brown canvas Micarta® scales, and a stainless steel backspacer. The spines of the blade, lock bar, and backspacer are all meticulously crowned, and a deep-pocket wire clip provides right-side, tip-up carry.

Japanese knifemaker Kazuyuki Sakurai specializes in intricate, handcrafted folding knives, many of which are inspired by the shapes of animals. Some of his most popular designs are the dog-shaped knives in his "Pochi" (poh-chee) series, which draws its name from the most common Japanese dog name, roughly the equivalent of "Spot." His first Spyderco collaboration faithfully translates this novel design into a unique production folder with a hollow-ground CPM S45VN™ blade, a bead-blasted titanium handle, a Reeve Integral Lock (R.I.L.), and a blue-anodized folding "tail," titanium pocket clip, and pivot-pin accent.

Native® 5 Lightweight CPM SPY27

C41PCBL5

Mule Team™ CPM SPY27

MT28P

Spyderco has long been an industry leader in the use of exotic, high-performance blade steels. After years of using the best materials the world's leading steel manufacturers could provide, we decided it was time to create our own. In close cooperation with Crucible® Industries, we have developed CPM SPY27—a particle metallurgy stainless steel containing a proprietary mix of alloys, including vanadium, molybdenum, niobium, nitrogen, and cobalt. This remarkable composition, enhanced by the amplifying effects of cobalt and the state-of-the-art Crucible Particle Metallurgy process, is produced exclusively for Spyderco and will be featured in select USA-made models. Every knife made with this steel will also have a distinctive cobalt-blue handle color that highlights its elite pedigree.

This Native 5 Lightweight showcases our new, exclusive CPM SPY27 blade steel in a signature cobalt-blue fiberglass-reinforced-nylon (FRN) handle.

In the knife industry a “mule” is a sample knife used for in-house performance testing. Spyderco's Mule Team Series has always taken this concept a step further by encouraging our customers to join in the process. Expertly crafted from our new, proprietary blade steel, CPM SPY27, the MT28 Mule Team is a fully sharpened fixed-blade blank that allows knife enthusiasts and hobbyists to attach their own handle scales and conduct their own performance testing. This item is sold consumer direct and includes the blade only.

RockJumper™

C254PBK/SBK

C254PBK

C254SBK

Kelly McCann is one of the world's leading experts in counterterrorism, antiterrorism, close combat, and all aspects of security. His decades of real-world operational experience are clearly reflected in the Canis—a no-nonsense folding knife optimized for personal protection. Its dramatic CPM® S30V® stainless steel blade combines a straight, Wharnccliffe-style edge with narrow bevels, a reinforced tip, and a weight-saving mid-blade swedge to maximize strength and cutting power. The ergonomic handle features peel-ply-textured carbon fiber/G-10 laminate scales, nested stainless steel liners, a high-strength Compression Lock, and a versatile four-position clip that supports all possible carry options.

Designed to fit the needs of outdoor enthusiasts and climbers, the RockJumper is a lightweight, mid-sized, folding knife that's born to perform. Its broad VG-10 stainless steel blade has a full-flat grind for optimal edge geometry and a full-length, perfectly straight cutting edge. Designed for unfailing reliability under pressure, its Wharnccliffe profile offers everything from extreme cutting power to scalpel-like precision. The knife's hand-filling handle is constructed with skeletonized stainless steel liners, fiberglass-reinforced-nylon (FRN) scales, and a stout back lock mechanism with a strong self-close function. Its Bi-Directional Texture™ pattern ensures a secure, non-slip grip, while a four-position hourglass clip and oversized lanyard hole offer a full range of carry positions. Together with the knife's other symmetrical features, they make every aspect of the RockJumper's carry and operation completely ambidextrous.

Since its introduction in 2011, Michael Janich's YoJumbo™ 2 design has earned a respected place in Spyderco's product line and legions of devoted followers worldwide. The YoJumbo builds on that success, scaling the design up by over 20 percent and refining its ergonomics to accommodate a wider range of hand sizes. Its formidable four-inch (102mm) Wharncliffe blade is hollow ground for superior edge geometry and features a fully accessible Trademark Round Hole for swift, ambidextrous, one-handed opening. The handle's open-backed construction and nested, skeletonized stainless steel liners keep weight to a minimum, while its coarse-textured G-10 scales promote a positive, non-slip grip. A high-strength Compression Lock and four-position pocket clip complete the package, making the YoJumbo a truly formidable cutting tool optimized for personal-defense carry.

Inspired by 19th century English Jack knives, the sway back pattern is a stylish and extremely functional cutting tool. In his latest Spyderco collaboration, renowned Polish knifemaker Marcin Slys supercharges this classic design by rendering it with state-of-the-art materials and craftsmanship. The SwayBack's hollow-ground Wharncliffe blade is crafted from CTS® XHP stainless steel and has a handsome stonewashed finish. It is housed in an open-backed handle constructed with solid titanium scales. Both scales are beautifully crowned for comfort and the reverse-side scale forms the foundation of a sturdy Reeve Integral Lock (R.I.L.) with a stainless steel interface. A polished stainless steel clip provides convenient carry and is reversible for left or right-side tip-up access.

Spyderco has always taken great pride in our efforts to push the envelope of performance by offering exotic blade steels in our knives. With that spirit in mind, we are proud to announce that we are offering a number of our best-selling models with blades crafted from K390. Manufactured by Böhler-Uddeholm, K390 MICROCLEAR® is a state-of-the-art cold work tool steel produced by the particle metallurgy process. Its advanced alloy mix was specifically developed to provide the extreme wear resistance and high compressive strength needed in industrial cutting, blanking, and punching operations. Despite its toughness, its exceptionally fine, homogeneous microstructure also makes it readily machinable and easy to heat treat. Collectively, these qualities make K390 an outstanding blade material for true steel connoisseurs. Spyderco is proud to feature it on some of our most popular models, which are also distinguished with distinctive blue-colored handles.

The Pacific Salt 2 epitomizes Spyderco's relentless pursuit of Constant Quality Improvement (C.Q.I.) in everything we do. It combines the ultra-corrosion-resistant qualities of H-1® blade steel with the refined ergonomics and four-position pocket clip of the best-in-class Endura 4 Lightweight. Its linerless construction also further reduces the knife's weight and its vulnerability to corrosion. This version of the Pacific Salt 2 features a bright yellow handle that is easy to see in and around the water with a choice of a PlainEdge™ or fully serrated SpyderEdge™ blade.

Scaled to split the difference between the byrd® Cara Cara™ 2 and Meadowlark™ 2, the Harrier 2 is, for many end users, the perfect sized cutting tool for everyday carry. The latest version of this popular design renders it in a classic all-stainless-steel format reminiscent of Spyderco's "old-school" folders. Its beautifully crafted handle features chamfered edges and flush-ground pins that literally disappear into its handsome satin finish. All other features are consistent with other versions of the Harrier 2, including a full-flat-ground 8Cr13MoV stainless steel blade, stout back lock, and versatile four-position hourglass clip.

Sprint Run™

12

This limited-edition Sprint Run expression of the Lil' Native elevates this pocket-friendly design with a satin-finished blade crafted from premium CPM S90V, a vanadium-rich stainless steel renowned for its wear resistance and corrosion resistance. Equally unique, the knife's handle features solid carbon fiber scales, which are precision machined to house its patented Compression Lock mechanism and reversible deep-pocket carry clip.

Native Chief™ CPM S90V

C244CF90VP

A longer, even more capable expression of the time-tested Native 5 design, the Native Chief is a natural platform for a Sprint Run—a special one-time-only version of a popular Spyderco model. This elite version of the Native Chief features a full-flat-ground, satin-finished CPM S90V blade and stunning solid carbon fiber handle scales. All other features of this spectacular knife are consistent with the standard version, including lightweight linerless construction, a high-strength back lock mechanism, a stainless steel backspacer, and a four-position pocket clip.

Micarta

Spiderco's Shaman with Micarta scales and a CPM® CRU-SWEAR® blade was one of the most wildly popular Sprint Runs we've ever produced. Although Sprint Runs, by definition, cannot be repeated, this elite version of the Shaman faithfully captures that same spirit with very similar materials. Its high-performance blade is crafted from Z-Wear PM, a particle metallurgy cold-work tool steel enriched with vanadium, tungsten, and molybdenum to offer exceptional hardness and wear resistance. The flat-ground blade is paired with brown canvas Micarta scales that offer both a secure, hand-filling grip and a classic old-school character.

Designed by Spyderco founder Sal Glesser and inspired by the groundbreaking innovations of French knifemaker Fred Perrin, the Swick is a purpose-designed personal-defense tool. Its most distinctive feature is a Perrin-inspired index-finger hole that locks the knife into the user's hand for superior grip security. Sized for a man's hand, the 1.03-inch-diameter (26.1mm) hole is flanked by a full-flat-ground Wharncliffe blade and a full-tang, pistol-grip-style handle. Concealed internal pins secure a pair of peel-ply-textured scales to the handle, and a strategically placed section of jimping (textured grooves) on the spine provides a non-slip thumb ramp. Made from ultra-corrosion-resistant LC200N, the Swick is accompanied by a custom-molded Boltaron® sheath with a fully adjustable G-Clip™ and breakaway ball chain to offer a full spectrum of carry options.

The Swick 6 is identical to the Swick 5 in every way—except for the size of its index-finger hole. At 0.91 inches (23.1mm) in diameter, its reduced size is more appropriate to ladies' hands, ensuring them a secure grip in even the most demanding circumstances.
