

Welcome to Spyderco "Reveal" Volume 4!

This Reveal is the first new-product announcement of 2020 and is designed to supplement Spyderco's 2020 annual Product Guide—the primary reference for our established product line. Within these pages, you'll discover our newest folding and fixed-blade knives, all of which are on track to be released early this year. You may also notice that by declaring this Volume 4, we have established a sequential numbering system for our Reveals, making them easier to reference and enhancing their historical value among serious collectors.

We are extremely excited about the products we are announcing in this Reveal, as they reflect the across-the-board innovation we have planned for this year. Whether your tastes lean toward affordable Value Folders, hardcore tactical designs, custom collaborations, or tried-and-true Spyderco classics supercharged with the hottest new blade steels, we've got you covered.

To keep pace with the latest Spyderco developments and product releases, we encourage you to follow us on social media, become a member of the Spyderco forum, subscribe to the Spyderco byte™ e-newsletter, visit the Reveal page of our web site ([Spyderco.com/reveal](https://spyderco.com/reveal)), and download the Spyderco smartphone app.

Thank you for your continued interest in Spyderco. It's going to be a great year!

Gratefully,

The Spyderco Crew

Spyderco's incredibly popular line of Value Folders takes a new turn with the Astute. Although it shares the same basic construction and materials as its brethren, it features a sleeker, more stylish design that is amazingly pocket friendly. The long, gently curved cutting edge and full-flat grind of its 8Cr13MoV stainless steel blade give it impressive cutting power and point utility. Its ergonomic, open-backed handle features full stainless steel liners for strength and textured G-10 scales to ensure a secure, non-slip grip. The sturdy LinerLock mechanism locks the blade securely when in use and a four-position pocket clip and lined lanyard hole allow all possible carry preferences. Simply put, the Astute sets a new standard in affordable Spyderco style.

Proudly offering all the features and benefits that define a Spyderco knife in a budget-friendly package, the Tenacious has long been the centerpiece of our Value Folder line. The Tenacious Lightweight raised the bar even further, replacing the original G-10 scales with injection-molded fiberglass-reinforced nylon (FRN) that reduces the knife's weight by almost 12 percent and adds the extreme grip security of Spyderco's Bi-Directional Texture™ pattern. For tactical end users, the newest version of this lightweight powerhouse adds a low-profile black-oxide blade coating and matching black-coated handle hardware and clip.

Sized to perfectly split the difference between our iconic Delica® 4 and Endura® 4 models, the Endela is rapidly earning a reputation as the perfect compromise. To make this full-service folder even more capable, it is now available with an Emerson Opener—an integral hook on the spine of the blade opens it automatically as it's drawn. This high-speed version of the Endela features a saber-ground VG-10 blade, skeletonized stainless steel liners, a sturdy back lock mechanism, and an injection-molded fiberglass-reinforced-nylon (FRN) handle in the distinctive blue-gray color of our Emerson-Opener-equipped knives.

The members of the Chaparral family of knives all share the same refined back lock folder design, but express it with distinctively different handle materials and treatments. The newest member of this elite class is the Chaparral Sun and Moon, which showcases a smooth white G-10 scale with a red G-10 inlay and a black G-10 scale with a genuine mother-of-pearl inlay. Reminiscent of a yin-yang symbol, this stunning prestige folder features a full-flat-ground CTS® XHP blade and a reversible deep-pocket wire clip.

Pacific Salt™ 2

C91SBK2

Pacific Salt 2 Black Blade

C91PBBK2

A dynamic combination of the third-generation Endura one-piece handle design and the ultra-corrosion-resistant properties of H-1® steel, the Pacific Salt was an incredibly capable full-service folding knife. What it lacked, however, were the improvements that make the current Endura 4 even better than its predecessor—like a high-traction Bi-Directional Texture pattern, enhanced handle ergonomics, and a versatile four-position pocket clip. The all-new Pacific Salt 2 fixes all that, integrating an H-1 blade with a linerless handle that proudly includes all these advanced features. Another shining example of Spyderco's passion for Constant Quality Improvement (C.Q.I.), this knife was born to perform in and around the water.

The original black-bladed Pacific Salt endured extensive military testing to become an issue item in aircrew survival kits. Following that proud tradition, the black-bladed Pacific Salt 2 takes this enhanced design and subdues it with a non-reflective titanium carbonitride (TiCN) blade coating and matching black coatings on its four-position clip and other handle hardware.

Spyderco is honored to support Keep a Child Alive, an organization dedicated to providing life-saving anti-retroviral treatment, care, and support services to HIV/AIDS-afflicted children and their families in Africa and the developing world. The Watu was inspired by traditional ethnic knives of Central Africa, so we are honored to give something back to its homeland by donating a portion of the receipts of each one sold. For more information on this worthy charity, please visit www.keepachildalive.org.

KCA.
KEEP A CHILD ALIVE

Designed by personal-defense authority Michael Janich, the Yojimbo 2 epitomizes the concept of the “tactical Wharnccliffe.” For users concerned with light discipline or those who simply prefer non-reflective blade finishes, this dynamic folder is now available in a low-profile all-black format. Its hollow-ground CPM® S30V® stainless steel blade is cloaked in a Diamond-Like Carbon (DLC) coating, and all its handle hardware—including its nested stainless steel liners, standoffs, screws, and four-position pocket clip—also have matching black finishes.

Drawing inspiration from the traditional knife of the Chokwe people of Central and Southern Africa, the original Spyderco Chokwe™ was a revered member of our Ethnic Series of knives. The Watu continues this proud tradition, translating the original ethnic pattern into an even smaller, handier form. Its distinctive triangular blade is full-flat-ground from CPM 20CV stainless steel and paired with an open-backed, coffin-shaped handle with full, skeletonized stainless steel liners, a high-strength Compression Lock® mechanism, and stunning carbon fiber/G-10 laminate scales. These features are complemented by a reversible deep-pocket wire clip that offers a choice of left or right-side, tip-up carry.

G-10

K390 is a high-alloy particle metallurgy tool steel enriched with high volumes of vanadium, tungsten, and cobalt. Produced by Böhler-Uddeholm, its advanced alloy composition offers exceptional edge retention and toughness and makes it an ideal choice for steel connoisseurs. This remarkable expression of the Ladybug is the first in a special series of Spyderco knives to supercharge the proven features of well-established models with this elite, high-performance steel. To make these K390-bladed knives even more unique, their injection-molded FRN handles will feature a distinctive blue handle color.

Designed by renowned custom knifemaker Gayle Bradley, the Nightstick is a uniquely modern take on the classic boot knife. Its flat-ground CPM S30V stainless steel blade is single edged to make it more legally friendly, but retains the traditional symmetrical bevels of this no-nonsense breed. Smooth G-10 scales flank the handle's full tang and integral double guard and are secured by stout tubular rivets. To support a wide range of carry positions and keep the knife poised for quick access, the Nightstick comes complete with a custom-molded Boltaron® sheath with a versatile G-Clip™ mount.

FRCP

Spyderco has long been an industry leader in the use of exotic, high-performance blade steels. After years of using the best materials the world's leading steel manufacturers could provide, we decided it was time to create our own. In close cooperation with Crucible® Industries, we have developed CPM SPY27—a particle metallurgy stainless steel containing a proprietary mix of alloys, including vanadium, molybdenum, niobium, nitrogen, and cobalt. This remarkable composition, enhanced by the amplifying effects of cobalt and the state-of-the-art Crucible Particle Metallurgy process, is produced exclusively for Spyderco and will be featured in select USA-made models. Every knife made with this steel will also have a distinctive cobalt-blue handle color that highlights its elite pedigree.

A supercharged version of the popular Para 3 Lightweight, this knife enhances all the proven features of the standard version with a high-performance CPM SPY27 blade.

This elite expression of the Manix 2 Lightweight combines its weight-saving advantages, full-service cutting power, and the strength of the Ball Bearing Lock™ mechanism with the enhanced edge retention and corrosion resistance of CPM SPY27.

byrd Harrier™ 2 Lightweight

BY01PBK2

Tracing its history back to the very first byrd model, the Harrier 2 is a practical everyday-carry cutting tool in the perfect "in-between" size. Now this utilitarian design is available in a lightweight version featuring injection-molded fiberglass-reinforced-nylon (FRN) handles with a non-slip texture. Its 8Cr13MoV stainless steel blade is full-flat ground for optimal edge geometry and has a textured index-finger choil and thumb ramp. The handle's nested, skeletonized stainless steel liners provide structural strength for the knife's sturdy back lock mechanism and anchor a four-position clip that offers all possible carry options. Best of all, it is over 20 percent lighter than its G-10-handled counterpart.

Flash Batch™

10

Flash Batch

Like our Sprint Runs, which are unique, limited-edition production runs of either current models or classic, discontinued designs, a Spyderco Flash Batch is a truly distinctive, one-time-only event. A Flash Batch, however, showcases a brand-new design that has not been previously produced and will never be duplicated in the exact same form again. To make them even more unique and collectible, Flash Batches are individually serialized with a laser-engraved number on every blade.

Based on knifemaker Michael Burch's wildly popular custom folder, the Spyderco Bombshell faithfully translates his unique design into a production knife. The heart of this heavy-duty folding knife is its thick CPM 20CV stainless steel blade, which features a drop-point profile, a hollow grind, and a no-nonsense stonewashed finish. Its stout handle is crafted with full, skeletonized titanium liners, radiused olive drab G-10 scales, and a matching G-10 backspacer. The liners form the backbone of the Bombshell's high-strength LinerLock mechanism and a pocket clip configured for right-side, tip-up carry ensures quick access. To make this remarkable knife even more unique, it is a Flash Batch, which means it will be produced only once in this exact form.

TM

CPM S45VN

CPM S45VN is a martensitic stainless steel specifically created to transcend its predecessors. Its carefully tuned chemistry promotes the formation of more chromium carbides, while leaving larger amounts of free chromium available for corrosion resistance. Together with a finely tuned formula of niobium, nitrogen, vanadium, and carbon, its composition offers a superior balance of edge retention, wear resistance, corrosion resistance, and toughness. All of these qualities are further enhanced by the Crucible Particle Metallurgy process, which ensures an exceptionally homogenous grain structure.

CPM S45VN

To showcase this high-performance steel, Spyderco is producing limited-edition Sprint Runs of a select number of our US-made models. Each CPM S45VN knife will also feature distinctive forest-green G-10 scales and an exclusive CNC-machined Diamond Arc™ pattern that gives them a visually stunning non-slip texture.

Crucible® CPM REX 45 is a super-high-speed particle metallurgy tool steel enriched with large volumes of cobalt, tungsten, molybdenum, and vanadium. Its high cobalt content increases the steel's attainable hardness and enhances the positive properties of steel's other alloys. The addition of vanadium promotes the formation of vanadium carbides, which provide high wear resistance, fine grain size, and increased toughness. A true steel connoisseur's blade material, REX 45 is an ideal steel for this prestigious Sprint Run series being produced in our USA factory. To further distinguish this unique family, all REX 45-bladed models feature a distinctive burnt-orange handle color.

MURRAY CARTER™ COLLECTION WAKIITA™ SERIES

Spyderco is honored to present our second series of high-performance kitchen knives designed by Master Bladesmith Murray Carter—the Wakiita Series. Equivalent to a sous chef or journeyman chef in a Western kitchen, Wakiita (pronounced *wah-kee-ee-tah*) literally means “near the cutting board,” and is a term used to address accomplished culinary professionals well on their way to becoming expert chefs.

The Wakiita Series captures the spirit of the journeyman chef by expressing Carter’s highly refined designs with solid stainless steel blades precision ground from CTS® BD1N—a high-carbon, nitrogen-enriched stainless steel that provides a superior balance of hardness, edge holding, and corrosion resistance. Ground exceptionally thin and straight for superior cutting performance, they proudly feature the signature “Carter Elbow”—a distinctive taper from the spine to the point that reinforces the blade’s tip.

In classic style, these knives showcase traditional *wa*-style (octagonal) handles. Painstakingly crafted from solid black G-10, their beautifully polished handles ensure both comfort and precise control.

A remarkable fusion of time-tested traditional designs and state-of-the-art modern materials, the Wakiita Series faithfully translates Murray Carter’s prized custom designs into high-performance cutlery that is sure to please even the most discriminating cooking enthusiasts.

BenShot® Lil' Native Rocks Glass

RG01

Spyderco BenShot Lil' Native Rocks Glass is available for purchase, exclusively at www.Spyderco.com

Spyderco Bead & Lanyard

BEAD5LY

Enjoy your beverages in ultimate Spyderco style with this truly unique bar glass. Handcrafted by the father-and-son team at BenShot exclusively for Spyderco, this 11-ounce rocks glass is embedded with a genuine LC200N blade from a Lil' Native back lock knife. The unsharpened blade is further showcased by an etched Spyderco "bug" and logo on the front of the glass. Proudly made in the USA, this is one of the most extraordinary Spyderco accessories we've ever offered.

This beautifully cast .92-inch (24mm) diameter pewter bead features a raised "bug" logo on both sides and is paired with a hand-braided black-and-red paracord lanyard. The perfect way to accessorize your favorite Spyderco knife, it also makes a great fob for your keychain.

Spyderco Messenger Bag is available for purchase,
exclusively at www.Spyderco.com

The product of an exclusive co-branding relationship with Vanquest—an undisputed industry leader in high-performance nylon gear—the “Spyderco by Vanquest” messenger bag is a distinctive version of their revolutionary Envoy-13 model. This highly refined fourth-generation design is fully configurable to meet all your everyday carry (EDC) needs. Its high-visibility padded main compartment accommodates laptops or tablets up to 13 inches in size, allows zippered access without opening the flap, and is loop lined to accept dividers and other hook-and-loop accessories. Expertly crafted from state-of-the-art materials including ultra-durable 1000-D and 500-D Cordura® nylon and YKK® zippers, this versatile design includes 22 strategically located pockets and slots for maximum organization. Collapsible bottle holders at each end accept 32oz (1L) Nalgene® bottles and a concealed carry compartment with a fully loop-lined panel allows instant access. Proudly bearing Spyderco logos on the inside and outside of the flap and on all its high-visibility zipper pulls, this is our idea of the perfect EDC messenger bag.
