

2023 NEW PRODUCT REVEAL

WELCOME TO SPYDERCO'S “REVEAL” VOLUME 14!

Welcome to Spyderco's "Reveal" Volume 14, our third new-product announcement of 2023. This Reveal complements Reveals 12 and 13 and our 2023 Product Guide to present a comprehensive reference of Spyderco's full line of knives, sharpeners, accessories, and apparel.

Within the pages of this Reveal you will find something to satisfy the needs and tastes of every knife enthusiast. Leading the pack is the all-new Bodacious™—a stout, full-service folding knife designed by our company co-founder Sal Glesser. This American-made powerhouse is joined by a number of other knives produced in our Golden, Colorado, factory, including the Lil' Native® Lightweight and variations of the Military™ 2, Para Military® 2, and Para® 3 featuring high-performance blade steels like our proprietary CPM® SPY27®. You will also find long-awaited Salt® Series versions of our best-selling US-made products, including several that proudly showcase Dr. Larrin Thomas' revolutionary CPM MagnaCut® blade steel.

Based on the incredible popularity of our CPM CRU-WEAR® and brown canvas Micarta® theme, we have expanded our so-called "CruCarta" offerings to include several more full-line American-made models. Both collectors and astute end users will appreciate our limited-edition knives, like Sprint Run™ expressions of the Military 2 and our classic Catcherman™ model, as well as an elite Flash Batch™ produced in cooperation with lionSTEEL®. For Mule Team™ fans we are offering our first-ever ceramic blade featuring state-of-the-art High-Impact Ceramic (HIC) material. And, for all knife users, we are proud to reintroduce our versatile ProFile™ sharpeners, which are uniquely contoured to easily sharpen all cutting tools at home or in the field.

This Reveal is one of our most ambitious ever and we sincerely hope you are as excited about it and our new-product offerings as we are. Thank you for your continued trust and confidence in us and for being a valued member of the Spyderco community.

Respectfully
The Spyderco Crew

BODACIOUS™ C263GP

Designed by Spyderco co-founder and *Blade Magazine* Hall of Fame® member Sal Glesser, the Bodacious is named after an American bucking bull that became famous as "the world's most dangerous bull." Inspired by that legendary animal's indomitable spirit and impressive strength, our Bodacious is a hell-for-stout folding knife designed for unfailing reliability. Its broad, leaf-shaped blade is full-flat ground from CPM® S30V® stainless steel and available in choice of PlainEdge™ or SpyderEdge™ formats. The knife's handle is built on a framework of skeletonized stainless steel liners nested within smooth G-10 scales. In addition to providing structural strength, the liners form the foundation of the knife's high-strength Compression Lock® mechanism and provide a secure mounting platform for its broad-based pocket clip, which is reversible for left or right-side tip-up carry.

BODACIOUS™ BLACK BLADE C263GPBK

The stout, all-purpose design of the Bodacious makes it an ideal choice for duty-bound end users and those who may operate in tactical environments where light discipline is a concern. To eliminate its reflective properties, the all-black Bodacious features a Diamond-Like Carbon (DLC) coating on its blade and matching black coatings on the handle liners, clip, and all other hardware. It is available with a PlainEdge blade or, for optimal cutting of fibrous materials, a fully serrated SpyderEdge blade.

MILITARY™ 2

CPM S110V®

C36GPDBL2

The long-awaited Military 2 enhanced the design of the time-tested Military Model with several significant design improvements, including Spyderco's signature Compression Lock mechanism, larger stainless steel liners, and a fully configurable four-position pocket clip. This elite expression of the design takes it to the next level with a blade crafted from CPM S110V—a state-of-the-art particle metallurgy steel enriched with high volumes of vanadium and niobium for exceptional wear resistance, edge retention, and corrosion resistance. Like all members of our CPM S110V family, its peel-ply-textured G-10 handle scales sport a distinctive dark blue color.

PARA MILITARY® 2

CPM SPY27®
C81GPCBL2

The Para Military 2 is one of Spyderco's most popular and iconic designs. It is therefore fitting that it should serve as a platform to showcase our proprietary blade steel—CPM SPY27. Developed in close cooperation with Crucible® Industries and exclusive to Spyderco, CPM SPY27 enhances the proven alloy formula of VG-10 stainless steel with niobium and nitrogen, additional carbon, molybdenum, and vanadium, and the many advantages of Crucible's state-of-the-art particle metallurgy process. To further highlight this elite blade steel, this knife's handle is capped with peel-ply-textured G-10 scales in a distinctive cobalt blue—one of the signature colors of our SPY27 family of knives.

PARA® 3

CPM SPY27
C223GPCBL

For many users, the best-selling Para 3 represents the perfect balance of compact size, light weight, legally permissible blade length, and full-service cutting performance. To raise the bar even further, this remarkable knife is now available with a blade crafted from Spyderco's proprietary CPM SPY27 stainless steel. Starting with the time-tested alloy formula of VG-10 stainless steel, SPY27 increases the volumes of carbon, molybdenum, and vanadium and adds niobium and nitrogen. Crucible Industries' state-of-the-art particle metallurgy manufacturing process then ensures a uniform distribution of these alloys throughout the steel for an extremely homogenous microstructure and maximum performance. To clearly identify this knife as a member of Spyderco's elite SPY27 family, its handle features peel-ply-textured G-10 scales in a distinctive cobalt blue color.

PARA® 3 LIGHTWEIGHT PINK C223PPN

The Para 3 Lightweight is a full-service cutting tool that also happens to be amazingly lightweight and compact. As such, it has become a popular choice for ladies, whose shallow pockets are not well suited to larger knives. To make it an even better "ladies' choice," Spyderco is proud to offer it with a bright pink fiberglass-reinforced-nylon (FRN) handle. All other features of this knife are faithful to the original, including a full-flat-ground CTS® BD1N stainless steel blade, a streamlined Compression Lock mechanism, non-slip Bi-Directional Texturing™ on the handle, an reversible deep-pocket wire clip that provides a choice of left or right-side tip-up carry.

PARA® 3 LIGHTWEIGHT PINK BLACK BLADE C223PPNBK

Make an even bolder fashion statement with this enhanced version of the pink-handled Para 3 Lightweight. It adds a black Diamond-Like Carbon (DLC) coating to the CTS BD1N blade and matching black coatings to the handle's liners, clip, and hardware. The result is a stunning two-tone color scheme that is sure to turn heads.

LIL' NATIVE® LIGHTWEIGHT C230^{PBK}

The original Lil' Native was created to provide the same proven functionality and reliability as our iconic Native® model in an ultra-compact package with a legally friendly sub-2.5-inch blade. Continuing that evolution, Spyderco is proud to introduce the Lil' Native Lightweight. This remarkable folding knife takes the Lil' Native Back Lock platform and lightens it by 40 percent with fiberglass-reinforced-nylon (FRN) handle scales. The injection-molded scales add the enhanced grip security of a Bi-Directional Texture pattern and are home to a deep-pocket wire clip that provides a choice of left or right-side tip-up carry. The business end of the knife is a full-flat-ground CTS BD1N stainless steel blade with a fully accessible Trademark Round Hole™ for easy one-handed opening with either hand. Available in both PlainEdge and SpyderEdge formats, this ultra-lightweight cutting tool is in a class by itself.

LIL' NATIVE® LIGHTWEIGHT BLACK BLADE C230^{PBBK}

For those who prefer the no-nonsense look of an all-black knife, this expression of the Lil' Native Lightweight adds a stealthy Diamond-Like Carbon (DLC) coating to the CTS BD1N blade and matching black coatings to the lock bar, deep-pocket clip, and other handle hardware. It is also available with a choice of a PlainEdge or fully serrated SpyderEdge blade.

CPM CRU-WEAR® & MICARTA®

When Spyderco introduced the first Sprint Run™ Shaman® combining the traditional look of brown canvas Micarta scales and CPM CRU-WEAR blade steel, we were overwhelmed by the response. Later dubbed "CruCarta," this distinctive pairing of old-school, high-performance materials became an instant classic. To ensure we could meet customer demand when we applied the "CruCarta" treatment to other models, we decided to make them full-line products, not limited editions. We began with the Para Military 2 and are now proud to add four more USA-made models to this elite family. All feature skeletonized full stainless steel liners, slim brown canvas Micarta scales, and CPM CRU-WEAR tool steel blades that offer an outstanding balance of edge retention and toughness. The scales of all these knives are sanded smooth but left unpolished, so they will naturally patina with age and handling to develop their own unique character.

SAGE™ 5

LIGHTWEIGHT
MAXAMET®

C123PGY

Carpenter® Technology's Micro-Melt® Maxamet is an extraordinary tool steel that was specially formulated to roll red-hot steel billets in Carpenter's steel mills. Spyderco is the only knife company to have mastered this demanding material well enough to feature it prominently in our production knives. The latest addition to our elite Maxamet family is this Sage 5 Lightweight. It showcases this incredibly hard, ultra-tough material in its full-flat-ground blade and houses it within a lightweight, Bi-Directional Textured handle. All other features are consistent with the standard version of this model, including nested, skeletonized stainless steel liners, a high-strength Compression Lock, injection-molded fiberglass-reinforced-nylon (FRN) scales, and a reversible deep-pocket wire pocket clip.

CHAPARRAL®

LIGHTWEIGHT

C152SGY

The Chaparral Lightweight is the most user-oriented member of Spyderco's unique Chaparral series of gentlemen's folding knives. Its tough fiberglass-reinforced-nylon (FRN) scales minimize weight while offering the non-slip security of our Bi-Directional Texture pattern. Now this incredibly capable pocketknife is also available with the enhanced cutting power of a fully serrated SpyderEdge blade. Like its PlainEdge counterpart, the full-flat-ground blade is crafted from CTS XHP stainless steel, has a fully accessible Trademark Round Hole for ambidextrous one-handed opening, and is supported by a sturdy back lock mechanism. If your daily cutting chores include fibrous materials like rope, webbing, and tape, put some teeth in your gentleman's folder.

PARA MILITARY® 2 SALT® YELLOW/BLACK CPM MAGNACUT®

C81GBKYLMCP2

CPM MagnaCut is a revolutionary knife steel that challenges the logic of conventional metallurgy to deliver an outstanding balance of edge retention, toughness, and extreme corrosion resistance. Based on our extensive in-house testing, Spyderco determined it to be worthy of inclusion in our elite Salt® Series of knives. The precision-machined blade of this Para Military 2 Salt takes full advantage of MagnaCut's remarkable qualities. Full-flat ground for optimal edge geometry, it is paired with a handle featuring G-10 scales with alternating black and yellow layers. Spyderco's signature Caribbean Bi-Directional Texture™ pattern is painstakingly machined into the scale surfaces, revealing the underlying yellow layer and creating a high-visibility, color-contrasting, non-slip pattern. Consistent with its Salt theme, the knife's nested liners, fully configurable four-position pocket clip, and all other hardware are crafted from fearlessly corrosion-resistant marine-grade materials.

PARA MILITARY® 2 SALT® BLACK G-10 CPM MAGNACUT BLACK BLADE

C81GMCBKP2

This tour-de-force expression of the Para Military 2 showcases a full-flat-ground blade crafted from CPM MagnaCut—a state-of-the-art particle metallurgy steel that offers an exceptional balance of edge retention, toughness, and superior corrosion resistance. Cloaked in a non-reflective Diamond-Like Carbon (DLC) coating, the PlainEdge blade is housed in a handle featuring peel-ply-textured black G-10 scales machined with the signature Caribbean Bi-Directional Texture pattern of Spyderco's US-made Salt Series knives. To complement its blade steel and finish, the knife's nested stainless steel liners, four-position pocket clip, and all other hardware are also made from ultra-corrosion-resistant materials and black coated.

MANIX® 2

LIGHTWEIGHT SALT CPM MAGNACUT

C101PYL2

The new Manix 2 Lightweight Salt proudly combines all the time-tested features of this iconic design with a full-flat-ground MagnaCut blade and ultra-corrosion-resistant handle hardware. Its fiberglass-reinforced co-polymer (FRCP) handle is injection molded in vibrant yellow for high visibility and includes our signature Bi-Directional Texture pattern for a secure grip in and around the water. To ensure ease of carry and ambidextrous operation, it features a reversible tip-up wire clip, our Ball Bearing Lock™, and a fully accessible Trademark Round Hole in the blade.

PARA® 3

LIGHTWEIGHT SALT CPM MAGNACUT

C223PYL

Sleek, simple, and fearlessly corrosion resistant, the long-awaited Para 3 Lightweight Salt may be the ultimate everyday carry knife for those who work in and around the water. This knife takes the innovative Para 3 Lightweight platform and supercharges it with a PlainEdge blade crafted from CPM MagnaCut—a revolutionary powder metallurgy stainless steel that offers an incredible balance of edge retention, toughness, and corrosion resistance. Its open-backed fiberglass-reinforced-nylon (FRN) handle is injection molded in bright yellow to ensure high visibility and features Spyderco's Bi-Directional Texturing for a secure grip, even with wet hands. To complete the package, the knife's streamlined Compression Lock, reversible deep-pocket carry clip, and all other hardware are all precision machined from ultra-corrosion-resistant materials.

NATIVE CHIEF™ LIGHTWEIGHT SALT CPM MAGNACUT C244PYL

This Native Chief Lightweight Salt proudly combines the best qualities of the lightweight Native Chief platform with the unparalleled edge retention, toughness, and corrosion resistance of CPM MagnaCut steel. Full-flat ground for optimal edge geometry and available in both PlainEdge and SpyderEdge configurations, its blade is supported by a precision-machined back lock mechanism and a linerless handle injection molded from vibrant yellow fiberglass-reinforced nylon (FRN). The handle includes threaded inserts that allow the four-position pocket clip to be mounted on both sides and both ends of the handle to support all possible carry preferences. And, like all our Salt Series folders, the handle hardware of this knife is crafted exclusively from ultra-corrosion-resistant materials.

NATIVE CHIEF™ LIGHTWEIGHT SALT LC200N C244PGR

Twenty-one percent lighter than its G-10-handled counterpart, the Native Chief Lightweight features fiberglass-reinforced-nylon (FRN) handle scales and high-traction Bi-Directional Texturing. Those qualities made it an ideal candidate for inclusion in Spyderco's remarkable Salt Series. This Native Chief Lightweight Salt showcases a full-flat-ground blade precision machined from ultra-corrosion-resistant LC200N steel, best known as NASA's material of choice for ball bearings in spacecraft. Available in both PlainEdge and fully serrated SpyderEdge formats, the blade is paired with a linerless handle injection molded in the signature high-visibility green color of our LC200N lightweight Salt family. The vibrant handle also houses the knife's sturdy back lock mechanism and includes four sets of threaded inserts to allow fully configurable mounting of a four-position pocket clip.

STRETCH™ 2 XL

LIGHTWEIGHT SALT

C258PYL

The Stretch 2 XL Lightweight represents more than three decades of evolution that began with Spyderco's classic folding hunting knives. Through years of relentless refinement, we have arrived at a full-sized, full-service cutting tool that is incredibly lightweight and easy to carry. So what could possibly make it better? How about crafting it with a fearlessly corrosion-resistant blade steel and making it a member of our elite Salt Series? Tipping the scales at a mere 3.0 ounces (84 grams), the Salt 2 XL Lightweight Salt is the largest folding knife in our Salt lineup. Its 3.95-inch (100mm) blade is hollow-ground from ultra-corrosion-resistant H-2 steel and available in a choice of PlainEdge or fully serrated SpyderEdge formats. The blade is supported by a sturdy back lock mechanism housed in a lightweight fiberglass-reinforced-nylon (FRN) handle. Injection molded in a bright yellow color for high visibility, the handle features a non-slip Bi-Directional Texture pattern for optimal grip security and a fully configurable four-position pocket clip that supports all possible carry options.

FLASH BATCH

SPYMYTO™ FLASH BATCH™

C265MTIP

The SpyMyto™ is a truly unique folding knife that was inspired by the lionSTEEL® Myto™ and is produced by lionSTEEL exclusively for Spyderco. Its hollow-ground, drop-point blade is crafted from M398—an enhanced version of Böhler-Uddeholm's M390 capable of achieving extremely high hardness and wear resistance. In addition to a fully accessible Trademark Round Hole, the blade features a removable flipper opener, ball bearing pivot washers, and a beautifully radiused spine. The SpyMyto's handle consists of a linerless green Micarta scale on one side and a solid titanium scale on the other. The latter forms the foundation of the knife's stout Reeve Integral Lock (R.I.L.) mechanism, which includes a hardened steel interface/overtravel stop. Both scales have painstakingly machined textured chamfers and are joined by a carbon fiber backspacer. A reversible deep-pocket clip mounts to the butt end of the handle to provide left or right-side tip-up carry. This stunning knife is being released as a Flash Batch—a distinctive, one-of-a-kind expression of a model that has not been previously released. Every knife will be individually serialized with discreetly placed laser engraving.

SPRINT RUN

REVEAL 14

CATCHERMAN™

SALT GREEN LC200N
SPRINT RUN™

C17PSGR

Originally introduced in 1992, the Catcherman was a folding fillet knife specifically designed to meet the needs of discriminating fishermen. One of our last models to feature an integral molded pocket clip, it also became a cult classic among serious Spyderco collectors. This limited-edition Sprint Run resurrects this unique design in a form that is distinctly different from all its predecessors. For the first time, its thin blade is full-flat ground and showcases ultra-corrosion-resistant LC200N steel. The partially serrated CombinationEdge™ blade is paired with a one-piece fiberglass-reinforced-nylon (FRN) handle injection molded in the signature bright green of our LC200N lightweight models. It faithfully includes the original Volcano Grip™ texture pattern on one side and an integral pocket clip on the other to provide right-side, tip-up carry.

[TECH SPECS]

CLOSED:	5.92in 150mm
OVERALL:	10.43in 265mm
BLADE:	4.64in 118mm
EDGE:	4.35in 110mm
THICKNESS:	0.070in 1.8mm
STEEL:	LC200N
WEIGHT:	2.8oz 78g
GRIND:	Full-flat
LOCK:	Back Lock
HANDLE:	FRN
CARRY:	Right-side
CLIP:	Tip-up
ORIGIN:	Japan

MILITARY™ 2

CARBON FIBER
CPM S90V™ SPRINT RUN

C36CFP2

This unique, limited-edition expression of the Military 2 proudly showcases Crucible CPM S90V blade steel and stunning carbon fiber handle scales. CPM S90V's advanced alloy composition promotes the formation of hard vanadium carbides instead of chromium carbides, enhancing the steel's wear resistance while leaving more free chromium available for superior corrosion resistance. The full-flat-ground PlainEdge blade of this elite knife takes full advantage of these qualities to deliver unparalleled cutting performance. It is housed in a handle featuring solid carbon fiber scales with a subtle peel-ply texture for a secure grip. Stainless steel liners nested within the scales provide superior structural strength and form the foundation of the knife's high-strength Compression Lock mechanism. They also anchor its four-position pocket clip, which supports ambidextrous tip-up or tip-down carry.

[TECH SPECS]

CLOSED:	5.51in 140mm

PROFILE™ STONES

Spyderco's ProFile Stones are convenient, carry-anywhere sharpeners that will put an edge or point on virtually any tool in no time. Their unique design provides multiple abrasive surfaces and shapes to efficiently sharpen knives with all different blade shapes and both plain and serrated edges. Their carefully radiused convex surfaces sharpen gouges and other woodworking tools, while their longitudinal grooves make quick work of awls, scribes, and other pointed tools. Even better, their advanced abrasives also do not require any oil or water during use. Sold individually or in a set of three, they come complete with protective suede pouches that also serve as non-slip pads during use.

PROFILE™ STONE

FINE

701_F

Made from white alumina ceramic, this fine-grit stone is approximately 1,200 grit and produces a polished cutting edge that is truly razor sharp. Suede pouch included. Eight inches long.

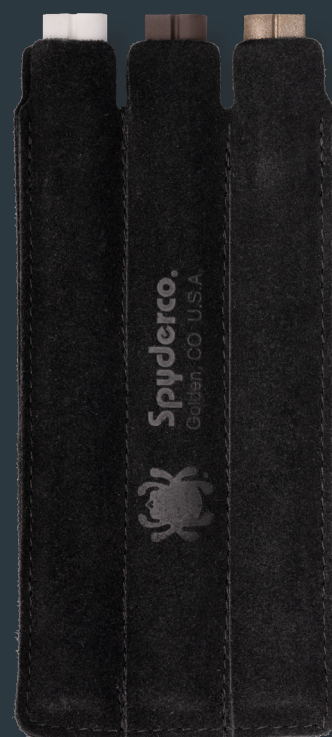

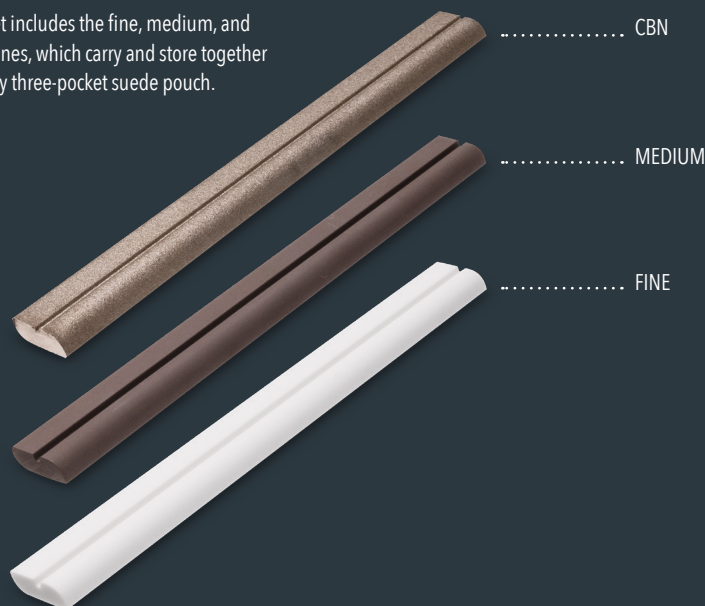

PROFILE™ STONE

SET

701MFCBN

This versatile set includes the fine, medium, and CBN ProFile Stones, which carry and store together in a high-quality three-pocket suede pouch.

PROFILE™ STONE

MEDIUM

701_M

Made from gray alumina ceramic, this medium-grit stone is approximately 600 grit. Ideal for most sharpening applications, it removes steel relatively quickly and produces a keen utility edge. Suede pouch included. Eight inches long.

PROFILE™ STONE

CBN

701_{CBN}

This ProFile stone consists of a steel "embryo" coated with particles of 400-mesh Cubic Boron Nitride (CBN)—a state-of-the-art superabrasive that is second in hardness only to diamond. It removes steel very aggressively and is ideal for reprofiling edges and as a first step in sharpening very dull cutting tools. Suede pouch included. Eight inches long.

Sold consumer direct only,
available from the Spyderco Factory
Outlet or through Spyderco.com

MULE TEAM™ HIC MT40P

One of the most unique Mule Team blades ever offered, the MT40 Mule is made from High-Impact Ceramic (HIC)—a state-of-the-art Ceramic Injection Molding (CIM) material. Developed by Harcan Industries of Switzerland, this remarkable zirconia-based material is significantly more resistant to breakage than conventional ceramics. It is specially formulated to obtain the highest density during sintering, giving it exceptional toughness and resistance to crack propagation. This proprietary material also achieves far greater hardness than steel blades, allowing it to both cut and retain its edge incredibly well. Because this blade is produced by an injection-molding process, its full tang only includes the holes necessary for handle-scale mounting. The additional weight-reduction holes seen in steel Mules have been eliminated. All Mule Team blades are sold consumer direct and available only at the Spyderco Factory Outlet or through Spyderco.com.
